

DATA SHEET

Scout/Warrior 40mm Ammunition Handling System

01 Description

With over 35 years' experience in manufacturing and fielding advanced Linear Linkless™ Ammunition Handling Systems, Meggitt Defense Systems is the leader in design, development and manufacture of medium-caliber ammunition storage and transfer systems for military ground vehicles.

The 40mm Linear Linkless™ Ammunition Handling System is at the forefront of ammunition handling. Meggitt's unique multi nature system allows for 40mm case telescoped rounds to be loaded anywhere in the system. This flexibility allows for the warfighter to select any round type available in the system, and have it available for use within seconds. Each round is handled individually without a metal link or belt, which reduces the likelihood of any snags or stoppages. The ammunition handling system stores the ammunition in a "serpentine" arrangement, to make the most of the available space."

The ammunition handling system magazine sits just outside the turret wall where rounds are individually loaded into the magazine via the load port. Sensors inventory the different round types in order to make them user selectable and available within seconds.

02 Key features and benefits

- Uses 40mm cased telescoped ammunition
- Automatic inventory system
- User selectable rounds types
- Automatic Multi Nature Ammunition Handling System

03 Applications

- General Dynamics Scout Infantry Fighting Vehicle
- Lockheed Martin Warrior Infantry Fighting Vehicle
